

COLORBOND ROOFING BY

fielders

STANDARD colours

* PLEASE NOTE: While all endeavours are made to faithfully and accurately depict products actual colours, variations may occur during the printing process. Please refer to colour samples for correct depiction.

Colorbond steel is produced with a Zinalume base to provide corrosion resistance and then covered with a chemically applied conversion layer to enhance coating adhesion. On top of this goes a baked on epoxy primer and finally a baked on exterior grade top-coat.

This oven-baked finish resists chipping, peeling and cracking and means that each of the Colorbond colours will not only look good for years to come but protect your home against harsh Australian conditions.

Finish on top with
Fielders Steel Roofing.

Bay Window Canopy - Flat Sheet

Quad Gutter and Fascia.
