

# INSULATION BY *csr bradford*

## STANDARD *options*

## PREMIUM *options*

For added comfort...

The premium option includes insulation of your internal walls for temperature control and noise reduction.

You may select all internal walls or nominate specific rooms to suit your needs.

A premium option of insulation between the upper and lower floors for two storey designs is also available, to minimise noise transfer and assist in temperature control.

Since its establishment in 1934, CSR Bradford Insulation has been a leading provider of insulation in Australia. Bradford offers a range of insulation products to make homes more comfortable, cheaper to run and energy efficient. A strong advocate of sustainable housing, Bradford works closely with industry and government to find ways to decrease greenhouse gas emissions through energy efficient buildings.

Bradford's products can prevent up to 70 per cent of heat transfers, making homes up to 10 degrees warmer in winter and 7 degrees cooler in summer. The reduced heating and cooling costs can amount to household savings of as much as \$300 per year. Home insulation also means less energy is used – so less greenhouse gases are emitted, thereby minimising the impact on climate change.

For smarter  
environments.
